Finding Icebergs

thethirstytourist.com

HOW IS a ICEBERG FORMED:

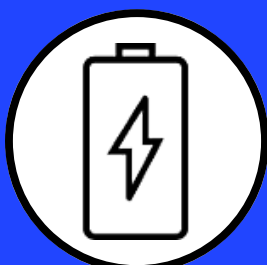

An iceberg begins it's journey as a glacier in a cold climate. As a glacier travels and migrates it begins to melt. When the edges of the glacier meet the sea or ocean the edge is cleaved off it and forms icebergs.

SEASONAL ACTIVITY:

Spring: The icebergs start floating down the east coast of Canada in April and are most plentiful through May.

Plan A Visit:
